An isomorphism $\tilde{\Gamma}$ between two representations $(\tilde{\Gamma} \cdot 1, V_1)$ and $(\tilde{\Gamma} \cdot 2, V_2)$ of G is a linear isomorphism $\tilde{\Gamma}: V_1 \rightarrow V_2$ which intertwines with the action of G , that is, satisfies Sun, 25 Nov 2018 04:47:00 GMT Representation Theory - UCB Mathematics | Department of ... - n p jmand n p 1 mod p: Theorem 1.4 (Sylow III*). Let $n \neq p$ be the number of p -Sylow subgroups of G . Then $n \equiv 1 \pmod{p}$, where P is any p -Sylow subgroup and $N(P)$ is its normalizer in G . We will first show how the conditions on $n \equiv 1 \pmod{p}$ in the Sylow theorems let us compute $n \equiv 1 \pmod{p}$ for

several specific groups. Then we will see applications of the Sylow theorems to group theory.
