For the PE exam - cut-fill problems are really simple. There are two types of problems that could be asked. 1. What is the volume of the cut/fill area for a road between two stations? 2. What is the volume of the cut/fill area for a road between multiple stations? In real life, mostly these problems are solved using computer programs. However, you ... Mathematical modeling of an engineering problem is a

Mathematical modeling of an engineering problem is a process by which the problem is represented as it appears in the real world and interpreted in an abstract form.

Numerical Analysis of Seepage in Embankment Dams -

embankment dams, which engineers often encounter in the dam project, are summarized, and some discussions are given on them by introducing recent development of design procedures and construction technology.
