Mon, 26 Nov 2018 10:01:00 GMT The Dynamic Genome and Transposable Elements - iBiology - Transposable elements and their kind often make up the bulk of genomic DNA, often approaching 50% of the genome. By contrast, the classic genes represent as little as 1.8% of genomic DNA, in case of the human genome. Fri, 23 Nov 2018 02:05:00 GMT The dynamic genome: Transposons and environmental ... - To date, there have been no published accounts of naturally occurring active DNA transposons in mammalian genomes, although many copies of inactive fossil DNA transposons are present . There are also a great many copies of retrotransposons in our genomes. In contrast to DNA elements, a few of these retroelements are active and capable of retrotransposition. The human genome harbors about 80 to ... Sun, 22 Jan 2017 02:12:00 GMT Transposable elements and the dynamic somatic genome ... - This volume gives an overview on mobile DNA and how such contradiction to the obligatory stability of genomes can be understood. Obviously, an understanding can only be achieved by cutting deeply into the evolutionary history of life along with the evolution of

transposable elements and dynamic genomes. Transposons and the Dynamic Genome - springer.com - There are two basic types of transposable elements: retrotransposons, which mobilize via an RNA intermediate in a 'copy and paste' reaction; and DNA transposons, which mobilize by a cut-and-paste reaction.
